

MANDATORY TUBERCULOSIS SCREENING FORM

Student's name (please print): _____
Last First MI

Country of Birth: _____ Year arrived in US: _____

SECTION A: TUBERCULOSIS (TB) EXPOSURE RISK QUESTIONNAIRE

- 1. Have you or a close contact ever been sick with tuberculosis? YES NO
- 2. Have you ever had a positive mantoux test? [A mantoux (PPD) is a skin test for tuberculosis] YES NO
- 3. Have you ever been vaccinated with BCG? YES NO
- 4. Were you born in, or have you lived, worked or visited for more than one month in any of the following:
Asia, Africa, South America, Mexico, Central America or Eastern Europe? YES NO
- 5. Have you had HIV/AIDS, diabetes, leukemia, lymphoma, head, neck, or lung cancer, chronic renal failure, illicit drug use, intestinal bypass, gastrectomy, chronic malabsorption syndrome, low body weight, prolonged corticosteroid therapy, an organ transplant, or a chronic immune disorder? YES NO
- 6. Do you have a persistent cough? (3 weeks or more), fever, night sweats, fatigue, loss of appetite, or weight loss? YES NO
- 7. Have you ever lived, worked, or volunteered in any homeless shelter, prison/jail, hospital or drug rehabilitation unit, nursing home or residential healthcare facility? YES NO

SECTION B: ATTENTION HEALTH CARE PROVIDER:

If student answers YES to any of the above questions, proof of the interferon gamma release assay (IGRA) or PPD is REQUIRED. If IGRA or PPD results are positive or student has a history of a positive PPD, a chest x-ray is REQUIRED. IGRA or PPD and/or chest x-ray must be done within six months prior to attendance. History of BCG vaccination does not prevent testing of a member of a high risk group.

PPD: Date placed _____ Date read _____ mm induration _____
(record actual mm of induration, transverse diameter:

Interpretation: Positive _____ (chest x-ray required) Negative _____ if no induration, write "0"
(based on mm of induration as well as risk factors)*

OR

IGRA: Date obtained _____ Negative _____ Positive _____

Chest X-ray: (Required if PPD or IGRA is positive) Date of chest x-ray _____ Normal _____ Abnormal _____

Treatment Plan (include plan for TB prophylaxis treatment) _____

***Interpretation Guidelines for PPD**

>5mm is positive:

- Recent close contact of an individual with infectious TB
- Persons with fibrotic changes on a prior chest x-ray consistent with past TB disease
- Organ transplant recipients
- Immunosuppressed persons taking >15mg/d of prednisone for >1 month; taking a TNF-a antagonist
- Persons with HIV/AIDS

>10 mm is positive:

- Persons who were born or lived in a high prevalence country
- History of illicit drug use
- Mycobacteriology laboratory personnel
- History of residence, working, or volunteering in high-risk congregate settings
- Persons with the following clinical conditions: silicosis, diabetes, chronic renal failure leukemia, lymphoma, head, neck, or lung cancer, low body weight, gastrectomy or intestinal bypass, chronic malabsorption syndromes

>15 mm is positive:

- Persons with no known risk factors for TB disease
